

Digital Document Storage

As a service to our builder and developer clients, we offer free and unlimited project documentation archiving! Using our RAID 6 redundant servers and backups, including offsite Cloud storage by Amazon, Pacific Property Consultants has taken the hassle out of project archiving. You simply upload entire files of PDF documents, plans or other non-modifiable records into our system by following our templates or using your own filing protocols. Rest assured that your documents will be safely and permanently stored for future claims or litigation purposes. Our DigitalDropSite™ system is guaranteed to be in compliance with the nation's leading insurance providers and satisfies California's Cal-Green documentation code standards. We can even provide a certification to municipalities that your documents are complete, and digitally archived by a third-party to comply with the new CAL-Green building code, for a nominal fee. Contact Pacific Property Consultants for more information!
